TESTING THE MODEL :

```python
from keras.models  import load_model
from keras.preprocessing import image
import numpy as np
```

```python
model = load_model("breastcancer.h5")
```

```python
img = image.load_img('malignant.png',target_size = (64,64))
```

```python
x  = image.img_to_array(img)
x = np.expand_dims(x,axis = 0)
```

```python
pred = model.predict_classes(x)
```

```python
pred
```

```
array([[1]])
```
